Qdrant Chatbot Test Document

This small document is created to test PDF upload, text extraction, embeddings, and Qdrant vector storage.

Project: LLMOps Multimodal Chatbot

The backend uses FastAPI to accept PDF and CSV files. It extracts text, splits the text into chunks, creates embeddings using the Gemini embedding model, and stores the vectors in a Qdrant collection named llmops_documents.

Qdrant collection: llmops_documents

Vector dimensions: 768

Expected test question: Which vector database does this chatbot use?

Expected answer: It uses Qdrant.

Another test question: Which API framework does the backend use?

Expected answer: It uses FastAPI.
